Bicon⁴ non-ionic surface active agent(s) in a concentration sufficient to increase the serum half-life of the immune globulin.

23. (Amended) An intravenous immune globulin preparation comprising an immune globulin, having a purity of greater than about 95 percent and a monomeric protein content of greater than about 94 percent, and at least one non-ionic surface active agent, said one or more non-ionic surface active agent(s) in a concentration sufficient to increase the serum half life of the immune globulin.
